

Application Laboratory Tutorial (week 04)

1. Do all of the following using the command-line
2. Go to the /root or /home directories.
3. Under your current directory, prepare the following directory hierarchy / structure using the command-line.

4. Now create a file named media.lk in the CMT directory.
5. Move the file media.lk to the SriPalee directory.
6. Then copy media.lk into the ADMTC directory.
7. Now go back to the UoC directory.
8. While being in the UoC directory, change the permissions of user of the ADMTC directory to read only, and permissions of other of the NOC directory to write only using numbers.
9. While being in the UoC directory, change the permissions of user and the permissions of other of the Finance directory to read & execute only using numbers.
10. Go to the NILIS directory and change the permissions of user and the permissions of other of the Finance directory to read & execute only using letters.
11. Without changing your current directory, change the permissions of the CMT directory to read & write using letters.
